

DISCUSSION 2: Post-Diagnostic Care

Challenge: Very few patients and families receive education, management and support for their disease, or information about how to live well and reduce symptoms.

Solution: Systematically provide patients and families access to education, care management, support and links to community resources.

Guiding Questions:

- What supports can you implement for patients with dementia after a diagnosis?
- How might new CMS reimbursement codes influence system improvements around dementia care in your organization? What are some things you can do now to prepare for implementation of these changes?
- Who could provide leadership for this effort? Who should be included on your planning team?
